BI-FOLD DOORS - Series BF30 INSTALLATION INSTRUCTIONS

1703 ATLAS ROAD • PO BOX 9126 • COLUMBIA, SC 29290 • 1.800.845.6100

STEP 1: Insert top pivots (A) into pre-drilled holes in top of door panels. Insert bottom pivot (B) into pre-drilled holes at bottom edge of pivot door panel at the jamb side of the opening.

STEP 2: Fasten track (C) at top of opening on header using long screws provided. Fasten jamb bracket (D) in line with track on jamb side of opening, make sure that base of bracket rests firmly on the floor.

If optional slide guide is used, snap slide guide (H) into middle of track.

STEP 3: Install door panels by inserting the top pivot at the pivoting side of door into track bracket. With top pivot inserted, lift upward on panels and position bottom pivot into jamb bracket on floor. Let bottom pivot sit onto jamb bracket firmly with knurled teeth engaged.

Depress guide pivot and position under track and release so guide pivot is securely positioned in track (or optional slide guide).

STEP 4: Adjust door height by slightly lifting panels and turning threaded stem of bottom pivot. Seat pivot into jamb bracket at desired height.

STEP 5: Adjust door horizontally by altering position of bottom pivot in jamb bracket. Lift door slightly and move bottom pivot in either direction as necessary to bring door plumb with opening. Check to ensure guide pivot does not disengage during door operation, and door edge does not rub jamb. If necessary, adjust track bracket by loosening bracket screw and slide bracket within the track. Tighten at desired location.

STEP 6: Mount knobs (E) in pre-drilled holes or at center of guide door, approximately 36 inches from floor.

STEP 7: (For 4 Panel Sets Only) - Mount aligners (F) on back side of guide door.

STEP 8: Insert snugger (G) into track at guide door side of opening.
